Important	
Design and User Experience	
International standards should be met for website design.	
More consideration will be given to visual and inventive design abilities.	
Good design ensures that web content is presented in the best way possible across different devices and user setups.	
A presentation about the website's functionality and design should be prepared prior to its website creation.	
Examples of websites for international theatre festivals that fit our criteria are shown below. Designs consistent with this will be considered.	
Timeline	25 days
